

innovare internet & telecom products

We know that when a company needs to make changes to their internet access or telecommunication system, they need to feel utterly confident that the changes will not only be better for the company, but also for those using it — and that's what we want, too.

With Innovare, we're holding our customer's hands throughout the transition, making sure that once an install is completed seamlessly and as stress free as possible, everyone knows how to use it. We want it to be an easy, enjoyable, and better solution than what they had before.

VALUE & EFFICIENCY

Working with Innovare, our customers receive cost- and mobile-efficient, user-friendly product solutions that ensure your business can do business successfully.

PRODUCTS

There are myriad factors when it comes to securing the right broadband, Dedicated Internet Access (DIA), wireless, and softphone solutions. Innovare walks our clients through the process and ensures full understanding of the parameters so that the right solution is created to meet all communication needs.

Our broadband offer includes packages with varying speeds through multiple internet providers. It's the perfect, cost effective, reliable solution for businesses that do not require the muscle of a dedicated internet access.

dedicated internet access (DIA)

With a DIA, your company is guaranteed to receive the bandwidth purchased. If your company purchases a 100M, you will always receive 100m. Additional benefits include synchronous upload and download speeds, and better throughput. Innovare will guide you through finding the right DIA solution to meet your company's needs.

wireless

Conducting business today means being mobile. Whether your employees are remote, or you've got wheels on the road that need accurate GPS, our wireless solutions will deliver what you need.

softphones/VoIP solutions

Employees and leadership can be available at their office number even when working remotely. This solution is efficient, doesn't require additional hardware, and ensures that your business doesn't stop.

custom buildouts including:

- **Structured Cabling** – Coax/Copper/Fiber Tel-Data, Wireless
- **Audio Visual** – Video Conferencing, Paging, Digital Signage
- **Security** – Detection Systems, IP Based Card Access, CCTV
